# PRODUCT & REGIONAL DASHBOARD

Detailed explanation of every KPI, chart, and filter

**Report purpose**

This report explains the second dashboard in your project. It focuses on product-level sales and profit, regional revenue and profit, loss-making sub-categories, and products that need attention.

**Reading note:** The values below are taken from the supplied screenshots. Amounts are shown using the same K (thousand) and M (million) abbreviations displayed in the dashboard. The underlying currency is not specified in the screenshots, so this report does not assume one.

# 1. Dashboard overview

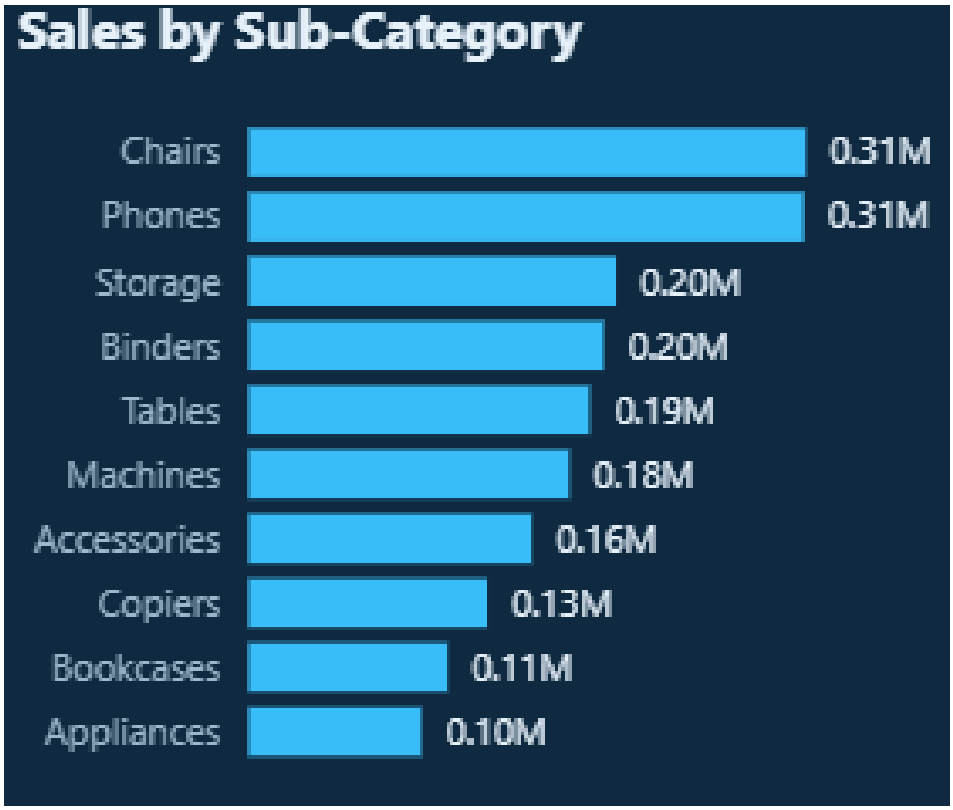

The Product & Regional dashboard helps identify which product groups generate sales, which generate profit, which regions perform well, and where losses occur. Unlike a general sales summary, this page places stronger emphasis on profit contribution and products that may require management attention.

# 2. KPI cards — key findings

| KPI card | Displayed result | Explanation |
|---|---|---|
| Highest-Revenue Category | Technology · $771K | Technology is the category with the greatest sales revenue in the current filter context. It is th |
| Highest-Profit Region | West · $104K | West is the region generating the highest total profit in the current view. This indicates strong |
| Sub-Categories Making a Loss | Tables, Bookcases, Supplies | These three sub-categories are flagged as loss-making. Their costs and sales outcomes sho |
| Products Needing Attention | 296 of 1,843 lose | 296 products out of 1,843 are reported as making a loss. This is approximately 16.1% of the |

**How to explain the KPI cards:** “Technology is the highest-revenue category at $771K, while West is the highest-profit region at $104K. Tables, Bookcases, and Supplies are identified as loss-making sub-categories. The dashboard also flags 296 loss-making products out of 1,843, so the business should examine product-level profitability rather than relying only on sales.”

## 3. Sales by Sub-Category — horizontal bar chart

**What the chart shows:** This chart ranks product sub-categories by total sales. Longer bars indicate more revenue. The values are shown in millions (M).

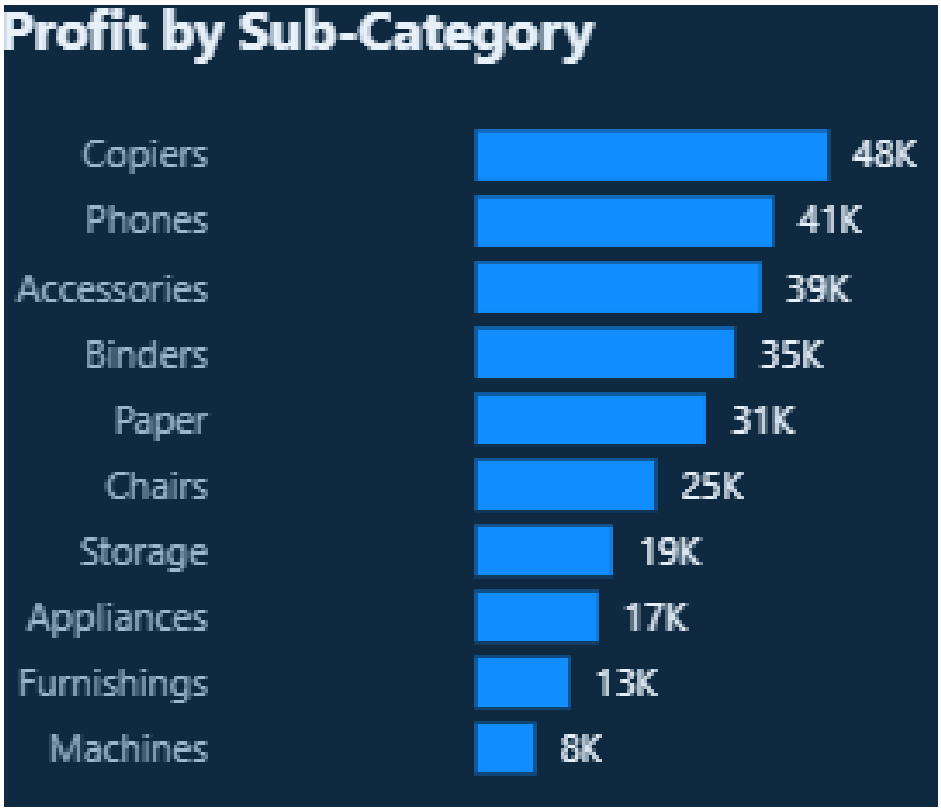

| Sub-category | Sales shown | Interpretation |
|---|---|---|
| Chairs | 0.31M | Joint-highest visible sales value. |
| Phones | 0.31M | Joint-highest visible sales value. |
| Storage | 0.20M | Third among the visible entries. |
| Binders | 0.20M | Approximately level with Storage. |
| Tables | 0.19M | Strong sales volume, but flagged as a loss-making sub-category in the KPI. |
| Machines | 0.18M | Mid-ranking visible sales contribution. |
| Accessories | 0.16M | Moderate sales contribution. |
| Copiers | 0.13M | Lower than the leading sub-categories. |
| Bookcases | 0.11M | Sales are present, but the KPI flags this sub-category as loss-making. |
| Appliances | 0.10M | Lowest among the visible entries. |

**Interpretation:** Chairs and Phones lead the visible sales ranking at approximately 0.31M each. Storage and Binders follow at around 0.20M. Tables also generate substantial sales (0.19M), yet Tables appears in the loss-making KPI. This demonstrates why sales volume must be considered alongside profit.

**Business use:** Ensure sufficient inventory for high-sales sub-categories, but investigate whether high sales are converting into profit. Review pricing, discounts, procurement cost, shipping, and returns for Tables and Bookcases.

**Important:** A scrollbar is visible in the chart, so the screenshot may not show every sub-category. The listed rows are the visible entries only.

## 4. Profit by Sub-Category — horizontal bar chart

**What the chart shows:** This chart ranks sub-categories by profit. The value labels are in thousands (K). Longer bars represent larger profit contributions.

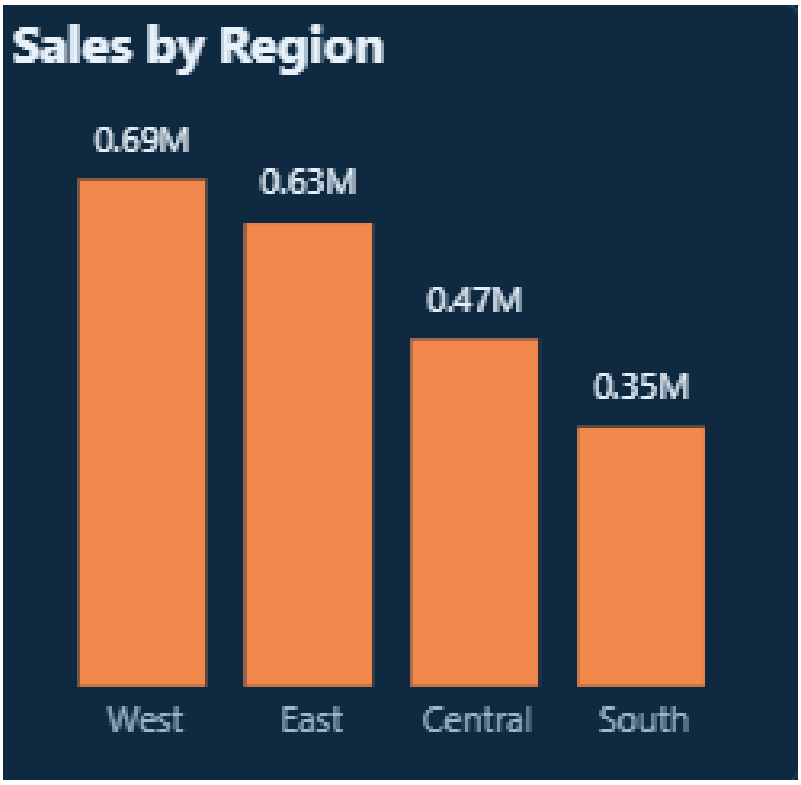

| Sub-category | Profit shown | Interpretation |
|---|---|---|
| Copiers | 48K | Highest visible profit contribution. |
| Phones | 41K | Second-highest visible profit. |
| Accessories | 39K | Strong profit contribution. |
| Binders | 35K | Strong profit contribution. |
| Paper | 31K | Positive profit contribution. |
| Chairs | 25K | Positive profit contribution. |
| Storage | 19K | Positive but lower profit. |
| Appliances | 17K | Positive profit contribution. |
| Furnishings | 13K | Relatively low visible profit. |
| Machines | 8K | Lowest among the visible positive-profit entries. |

**Interpretation:** Copiers lead the visible profit ranking at 48K, followed by Phones at 41K, Accessories at 39K, and Binders at 35K. Machines show only 8K profit among the visible entries. This ranking differs from the sales ranking: a sub-category that is not first in sales can still be first in profit.

**Business use:** Study the cost and pricing structure of high-profit sub-categories and identify whether their successful practices can be applied elsewhere. For low-profit groups, investigate margin improvement before increasing sales volume.

**Important:** A scrollbar is visible, so this chart may contain additional sub-categories not shown in the screenshot. The values above describe only the visible portion.

## 5. Sales by Region — column chart

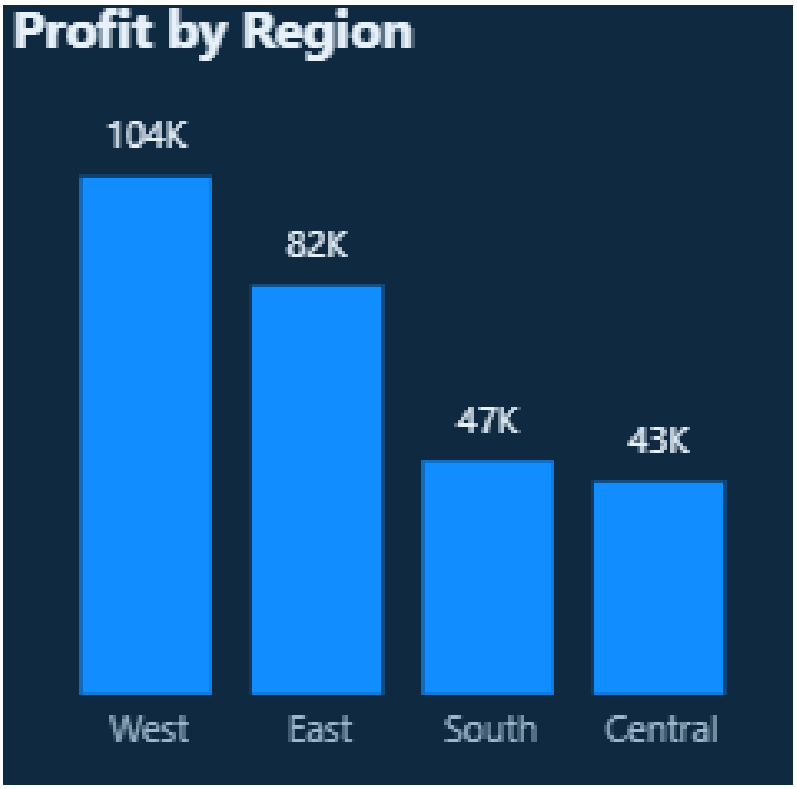

**What the chart shows:** It compares total sales across West, East, Central, and South. The vertical axis is represented by bar height; the labels above each bar show sales in millions.

| Region | Sales | Position |
|---|---|---|
| West | 0.69M | Highest sales |
| East | 0.63M | Second-highest |
| Central | 0.47M | Third |
| South | 0.35M | Lowest sales |

**Interpretation:** West generates approximately 0.69M in sales, followed by East at 0.63M. Central contributes 0.47M and South 0.35M. West and East are the two largest revenue regions in this view.

**Business use:** Compare regional demand, customer mix, product availability, pricing, and sales coverage. Investigate why South and Central have lower sales, while avoiding the assumption that lower revenue alone means weaker operational performance.

## 6. Profit by Region — column chart

**What the chart shows:** It compares profit generated by each region. The values are in thousands (K).

| Region | Profit | Position |
|---|---|---|
| West | 104K | Highest profit |
| East | 82K | Second-highest |
| South | 47K | Third |
| Central | 43K | Lowest profit |

**Interpretation:** West leads regional profit with 104K, followed by East at 82K. South generates 47K and Central 43K. West is strongest in both sales and profit. Notice that South has lower sales than Central but higher profit in this chart, which may indicate differences in product mix, discounts, or costs.

**Business use:** Compare both sales and profit before deciding which regions need attention. Review discounting, shipping expenses, product mix, and operating costs in Central and South. Use West as a region to study for practices that may be transferable.

# 7. Top 10 Products by Profit — horizontal bar chart

**What the chart shows:** This visual ranks products with the highest profit. The green bars extend to the right, and the labels show profit in thousands (K). Product names are shortened in the screenshot.

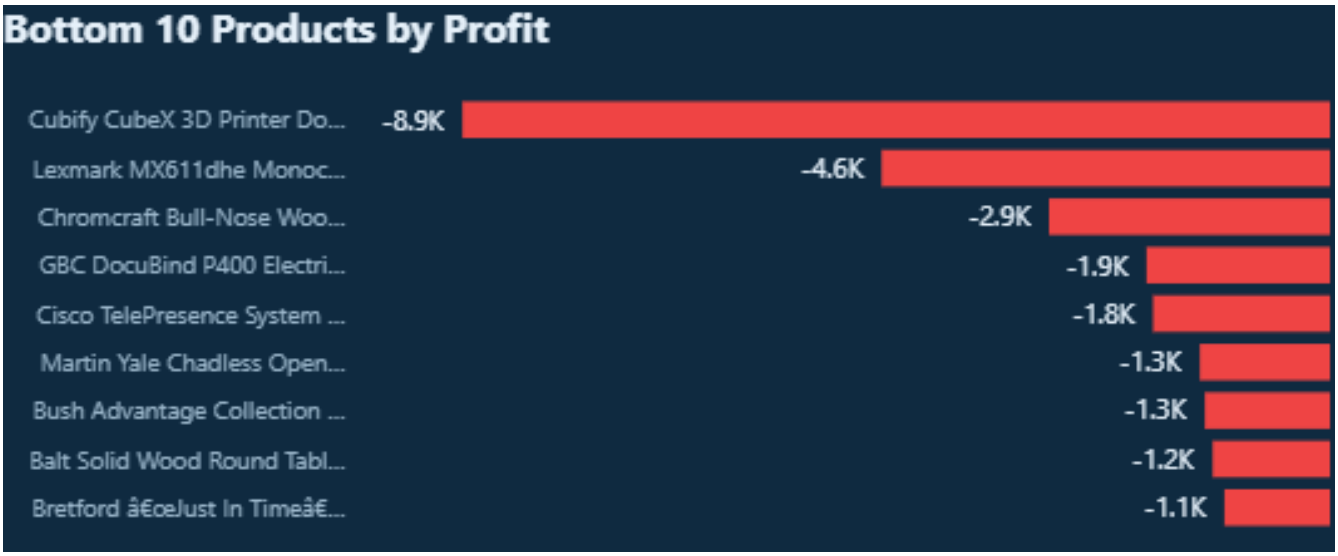

| Visible product label | Profit shown |
|---|---|
| Canon imageCLASS 2200 A… | 20.2K |
| Fellowes PB500 Electric Pun… | 10.0K |
| Ibico EPK-21 Electric Binding… | 6.3K |
| Hewlett Packard LaserJet 33… | 6.0K |
| Canon PC1060 Personal Las… | 4.6K |
| HP Designjet T520 Inkjet Lar… | 4.1K |
| Ativa V4110MDD Micro-Cut … | 3.8K |
| 3D Systems Cube Printer, 2n… | 3.7K |
| Plantronics Savi W720 Multi… | 3.7K |

**Interpretation:** Canon imageCLASS 2200 is the leading visible product by profit at 20.2K, about twice the 10.0K shown for the next product, Fellowes PB500. The remaining visible products contribute approximately 3.7K–6.3K each.

**Business use:** Monitor stock and supplier reliability for profitable products so that replenishment problems do not interrupt sales. Review their margins, order frequency, and inventory turnover to decide appropriate stock levels.

**Screenshot note:** Although the chart title says Top 10, nine product rows are readable in the supplied screenshot. Confirm the full list and product names in the underlying dashboard.

# 8. Bottom 10 Products by Profit — horizontal bar chart

**What the chart shows:** This chart identifies products with the lowest profit or largest losses. The red bars extend leftward from the zero point, and negative values indicate that the product generated a loss rather than a profit.

| Visible product label | Profit / loss |
|---|---|
| Cubify CubeX 3D Printer Do… | -8.9K |
| Lexmark MX611dhe Monoc… | -4.6K |
| Chromcraft Bull-Nose Woo… | -2.9K |
| GBC DocuBind P400 Electri… | -1.9K |
| Cisco TelePresence System … | -1.8K |
| Martin Yale Chadless Open… | -1.3K |
| Bush Advantage Collection … | -1.3K |
| Balt Solid Wood Round Tabl… | -1.2K |
| Bretford æCeJust In Timeæ… | -1.1K |

**Interpretation:** Cubify CubeX 3D Printer is the largest visible loss-maker at -8.9K, followed by Lexmark MX611dhe at -4.6K and Chromcraft Bull-Nose at -2.9K. The other visible products show smaller losses, ranging approximately from -1.1K to -1.9K.

**Business use:** Prioritise the products with the largest negative profit. Check selling prices, purchase costs, discounts, shipping charges, returns, and damaged-stock write-offs. Possible actions include renegotiating supplier prices, changing discount rules, adjusting prices, or reviewing whether the product should remain in the assortment.

**Screenshot note:** Nine product rows are readable in the screenshot although the title says Bottom 10. Product names are truncated; verify exact names and the final row in the source dashboard.

# 9. Dashboard filters — how to use them

The visible slicers let the user change the data displayed across the dashboard:

- **Year:** Choose 2023 or 2024 to view a particular year.
- **Region:** Choose Central, East, South, or West to focus on one or more regions.
- **Category:** Select a product category. The screenshot visibly shows Furniture and Office Supplies; the arrow indicates there may be additional category choices.

When filters are applied, KPI cards and charts should recalculate for the selected data. Always state the selected filter context when reporting a number. For a comparison, use consistent filters on both views.

# 10. Main findings from this dashboard

- **Technology leads revenue:** It is the highest-revenue category at $771K.
- **West leads regional profit:** West generates 104K profit and also has the highest regional sales at 0.69M.
- **Losses need attention:** Tables, Bookcases, and Supplies are identified as loss-making sub-categories.
- **Product-level risk:** 296 out of 1,843 products are reported as loss-making, approximately 16.1%.
- **Sales and profit rankings differ:** Chairs and Phones lead visible sub-category sales, while Copiers leads visible sub-category profit.
- **Individual products vary:** Canon imageCLASS 2200 is the leading visible product by profit, while Cubify CubeX 3D Printer is the largest visible product loss-maker.

# 11. Recommended business actions

- Investigate loss-making sub-categories, especially Tables, Bookcases, and Supplies, by analysing price, discount, cost, shipping, and return patterns.
- Prioritise the largest loss-making products for review; start with Cubify CubeX 3D Printer and Lexmark MX611dhe based on the visible chart.
- Protect the availability of high-profit products and sub-categories, while checking stock turnover to avoid excess inventory.
- Compare regional profit as well as sales; investigate why South shows higher profit than Central despite lower sales.
- Use supplier negotiations, pricing changes, discount controls, and product assortment reviews to improve margins.

## 12. Important interpretation notes

The screenshots show rounded values and truncated product names. Some visuals have scrollbars, meaning not all sub-categories or products are visible at once. Therefore, this report describes the values that can be read from the supplied images; it does not claim that the visible rows are the complete underlying ranking.

The “296 of 1,843 lose” KPI is interpreted as 296 products with negative profit out of 1,843 products counted. This is approximately 16.1% (296 ÷ 1,843 × 100). Confirm the exact measure definition in the dashboard if it counts distinct products, product records, or another unit.

The dashboard’s KPI cards and charts may change when Year, Region, or Category filters are selected. The displayed values should not be treated as fixed totals independent of those filters.

## 13. Short explanation for project presentation / viva

“This Product & Regional Dashboard analyses product and regional performance with a focus on both revenue and profitability. Technology is the highest-revenue category at $771K, and West is the highest-profit region at 104K. The dashboard identifies Tables, Bookcases, and Supplies as loss-making sub-categories and reports that 296 out of 1,843 products are making a loss. The sub-category charts show that Chairs and Phones have the highest visible sales, while Copiers has the highest visible profit. The regional charts show that West leads both sales and profit. The top-products chart highlights Canon imageCLASS 2200 as the leading visible product by profit, while the bottom-products chart identifies Cubify CubeX 3D Printer as the largest visible loss-maker. These insights help management improve pricing, cost control, supplier negotiations, inventory planning, and product selection.”
